

E_XTS_TRANSPORT_CTRL.CMD_TRANSPORT_START:

1. Clear all stations
2. Send Mover_1 to _StationStart.rPosWait
3. Send all other movers with higher target pos, so Mover_1 will be leading the pack
4. Check for arrival of Mover_1 and all mover standstill
5. re-target all other Movers to Mover_1 target.
6. Enter all ST_MOVER_DATA into the LinkedList of the Station at fb_TransportUnit.StationStartIndex
