

FB for APPLICATION operation mode purposes:
- uses reference to XtsTransportCtrl
- uses reference to XtsTransportState

FB for APPLICATION process purposes:
- uses I_ProcessCollector
- init's connected FB_ProcessCollector instance

- may be connected by I_Process_LinkedList
- get input list element from preceding process
- set output list element to succeeding process

FB for APPLICATION mover manipulation purposes:
- uses reference to MoverCtrl
- uses reference to MoverState

- offers direct control over mover,
aside from process handshakes

FB_ProcessCollector EXTENDS **FB_StationCollector**
IMPLEMENTS **I_ProcessCollector**
