ABSTRACT fb_StationCollector

- StationLast - StationFirst >= 0
- Range of stations must be closed and in order
- writes and deletes bits in masks according to E_STATION_STATE
- very simple MoverPerMinute counter

.States()
- called by extending class

```
// state words for XtsStations in my range
  _wStateDisable      : T_PROCESS;
  _wStateEnable       : T_PROCESS;
  _wStateEnter        : T_PROCESS;
  _wStateStart        : T_PROCESS;
  _wStateDone         : T_PROCESS;
  _wStateNest         : T_PROCESS;
  _wStateOut          : T_PROCESS;
  _wStateGone         : T_PROCESS;
  _wError             : T_PROCESS;
  _wErrorFatal        : T_PROCESS;
```

_stStationCtrl → **GVL_XTS.StationCtrl[] (ST_STATION_CTRL)**

_stStationState → **GVL_XTS.StationState (ST_STATION_STATE)**

_MoverInfo → **GVL_XTS.MoverInfo[] (ST_MOVER_INFO)**

StationFirst
